Agriculture

Agriculture is one of the most important industries in Texas and the United States. Many businesses, financial institutions and individuals are involved in providing supplies, credit and services to farmers and ranchers in processing and marketing commodities.

Farm and farm related employment accounts for 26 percent of jobs in non-metro areas and 13 percent in metro areas, for a statewide average of 14 percent of employment.

With increasing demand for food and fiber worldwide, and because of the importance of agricultural exports to this nation's trade balance, agriculture is destined to play an even greater role in the future.

Texas ranked second during 2005, behind California among states in farm receipts. A large area of productive soils and excellent export and transportation facilities favor farming and ranching operations in the state.

Texas ranks first in sales of cattle and calves, sheep and wool, goats and mohair, and cotton; and in the value of farm real estate, number of farms and ranches, and amount of farm and ranch land.

The number of farms in Texas has decreased from 506,000 in 1931 to 230,000 in 2006, with an average size of 564 acres.

Farms with sales of less than \$10,000 gross value total 157,000, or 68 percent of all farm operations, but use only 16 percent of the land. Operations that have \$10,000 to \$99,999 in sales total 56,500, make up 25 percent of the group, and 35 percent of acreage. Farms with sales of \$100,000 to \$249,999 total 8,200, use 18 percent of land, and account for 4 percent of farms. The operations with \$250,000 and over in sales total 8,700, or 4 percent of farms, and include 31 percent of land.

The Texas Cooperative Extension and The Texas Agricultural Experiment Station, agencies of The Texas A&M University System, support the state's agricultural industry through education and research.

The Changing Face of Texas and U.S. Agriculture

Agriculture in Texas Today

- Agriculture is big business in Texas -- the estimated value of 2006 agricultural production and related items totaled \$17.1 billion. That is down sharply from \$18.5 billion in 2005 and \$18.0 billion in 2004. The statewide drought in 2006 was the main reason for the reduced value of production from the year before.

Factors Impacting Change in Agriculture

- Consumer-driven changes
 - ☞ Consumer-driven change is becoming the driving force in agriculture.
 - ☞ Changing consumer demands are challenging existing marketing institutions and the traditional ways of doing business.
 - ☞ More and more emphasis is being placed on meeting customer's food needs/interests (convenience, lower cholesterol, healthier, lower prices, increased variety, etc.)
 - ☞ Commodity-based food production system is rapidly moving to a system designed to meet consumer expectations that reflect safety, health and the environment.
 - ☞ The ever-demanding consumers drive the market today. They want simplified, tailored solutions that bring convenience and help improve their lives.
 - ☞ Traceability of food items to their earliest production step will be a key to convincing consumers that safety, health and environmental demands of food are met.
 - ☞ More information is being uncovered on an individual's nutritional needs based on genetic diversity. This will eventually lead to a "diet prescription". Therefore, information on how food products originate is critical.
 - ☞ Consumers are becoming increasingly concerned about genetically engineered crops and their impact on both human health and the environment.
 - ☞ Consumers are gaining more power and control in the marketplace.
 - ☞ Manufacturers will be selling more direct to retailers and consumers.
 - ☞ The Internet, Web sites, and E-Commerce will expand distribution systems, creating continuous supply chains that are convenient to consumers.
- Convenience and lifestyle factors
 - ☞ Fast food -- time is precious commodity
 - ☞ Eating out -- increasingly popular with two wage-earner family

- ☞ Pre-cooked foods -- a time saver for family meals
- Economics
 - ☞ The Farm Security and Rural Investment Act of 2002 -- flexibility, more market-oriented, and better “safety net” than 1996 FAIR Act
 - ☞ Production costs -- continue to increase
 - ☞ Commodity prices to farmers -- vary, often below cost of production
 - ☞ Water availability and costs are cause for concern
 - ☞ Drought -- droughts in 1996, 1998, 2000, and 2006 have taken more than \$22 billion from the Texas economy. Farm and ranch production losses during the same years totaled about \$10.0 billion.
 - ☞ Increased capital outlay/investment
 - ☞ New technology/biotechnology/genetic engineering
 - ☞ Today, agriculture operates in a global, high-tech, consumer-driven environment. The world economy is characterized by the instant flow of capital, communications, and information.
 - ☞ A global food system has emerged which encompasses everything from production to processing to consumption. Increasingly, companies are finding that the best way to plug into the global food system is to form strategic partnerships that increase the ability to source, distribute and transport products.
 - ☞ Improvements in transportation, storage and food technology mean more fresh food can be moved further and faster at lower costs.
 - ☞ Information technology is being used to generate new efficiencies throughout the food and fiber chain.
- Impacts of a “prescription food” system
 - ☞ More detailed record keeping
 - ☞ More restrictions on choice or inputs/practices
 - ☞ Precision agriculture will take on new dimensions through the use of satellites, computers and other high-tech tools to help producers manage inputs such as seed, fertilizers, pesticides and water.
 - ☞ Farmers will be required to become sophisticated producers of food products for which they can be held responsible all the way to the consumer.
 - ☞ These changes will be global in nature as this new world food system develops.

- ☞ Consumers will define food as an input or a prescription for their physical condition, mental health and safety as well as a template for beneficial environmental practices in food production.
 - ☞ Companies and retailers require specific and consistent product characteristics, assured supplies, and timely delivery. Retailers are increasingly contracting directly with producers to meet consumer desires and reduce marketing costs.
 - ☞ The combination of globalization, technology, and ever-demanding consumers means a more tightly connected food chain with stronger linkages among producers, processors, and retailers.
 - ☞ On the one hand, consolidated retailers want large volumes of branded, high-quality products. Processors are expanding operations, acquiring new product lines, or merging with others in order to meet the retailers' needs.
- Land use priorities
 - ☞ Crop, livestock and forest production
 - ☞ Recreation/ecotourism
 - ☞ Wildlife management for income
 - ☞ Accessibility: public and privately owned property
 - ☞ Environmental management
 - ☞ Increased emphasis on conservation of natural resources
 - ☞ Water use and availability
 - Demographics
 - ☞ Changes revealed in the U.S. by the 2002 Census of Agriculture data compared to the 1997 Census
 - √ Big (2,000 acres or more) farms increased 5 percent.
 - √ Number of 10 to 49 acre farms increased by 6 percent -- but they are being operated by part-time farmers. The number of 1 to 9 acre farms decreased 15 percent, and the 50 to 2,000 acre operations decreased slightly.
 - √ Average farm size increased 10 acres to 441 acres.
 - √ The average age of operators has increased to 55.3 years from 54.0.
 - √ Total number of U.S. farms declined to 2.1 million; this is a decline of about 86,894 farms since 1997.
 - √ Fifty-nine percent of farms have less than \$10,000 in sales.

- √ Families or individuals operate 90 percent of operations; 6 percent are partnerships; 3 percent corporations; and other, 1 percent.
- √ Acres of land in farms decreased 1.7 percent.
- ☞ Changes in Texas agriculture revealed by the 2002 Census
 - √ Growth to large farms in Texas has slowed.
 - √ Texas farms with 1,000 acres or more declined 410 to 22,562 in 2002.
 - √ The only increase in farms with less than 1,000 acres was 6,925 to 61,015 farms in the 10 to 49 acre group.
 - √ Land in farms decreased by 4.08 million acres to 129,877,666.
 - √ Average farm size decreased 4 percent to 567.
 - √ Number of farmers whose principal occupation was farming increased 25 percent to 122,719.
 - √ Total number of farms increased slightly from 228,173 to 228,926.
 - √ The number of family or individual farms increased 19 percent to 210,409; partnership farms decreased 32 percent to 12,720; and corporations decreased 23 percent to 4,298. Individuals and families owned 91.9 percent of farms and ranches; partnerships, 5.6 percent; corporations, 1.9 percent; and others, 0.07 percent.

What Will the New Face of Texas Agriculture Look Like?

- Trends reflect some observations
 - ☞ Larger commercial farms and ranches
 - ☞ More smaller part-time farms
 - ☞ More non-farm landowners (other income)
 - ☞ Increasing demand for rural land as investment and for recreation
 - ☞ Shifts -- production/management to reflect
 - √ Improved business/management skills
 - √ Greater risks
 - √ Economics of production -- bottom line
 - √ Comprehensive marketing skills
 - √ Processing facilities (market for products)

- √ Environmental issues
- √ New technologies
- ☞ Diverse income alternatives -- livestock, crops, leases, non-farm businesses
- ☞ Balance of business and production management
- ☞ Lifestyle vs. viable economic unit
- ☞ Best use/demand for land (crops, livestock, wildlife, back to natural habitat, tourism)
- ☞ Consumer-driven markets

Impacts

- Food and fiber production system to feed a growing world population
- Role of USDA and Land Grant University Research and Extension in serving the ag industry and non-ag landowners
- Land values driven in part by non-farm use
- Develop educational programs for absentee landowner

Considerations for Producers

- Become owners or partners in businesses that furnish supplies, services, transportation, storage, etc. Also consider more pooling arrangements in marketing for bargaining power.
- Farmers are taking the lead in more efficiently synchronizing farm production with market demand by recognizing higher value production and value-added processing businesses.
- Pay particular attention to markets for niche or specialty crops.
- Consider leasing or jointly owning large and expensive equipment or using custom operators rather than individually owning such equipment as in the past.
- Develop marketing plans that include forward pricing by contract and use of commodity option markets.
- Devote more attention to becoming better at keeping records that help manage their expenses and improve marketing skills. It will be more critical than ever to know the cost per bushel of grain, per pound of cotton and per hundredweight of cattle.
- Seek out alternative production practices and diversification based on available resources. Quail, dove, turkey, pheasant, waterfowl, deer and even wild hog hunting, as well as wildlife watching (birding, wildlife trails, etc.), can be a growing enterprise for many operations.

Characteristics of Successful Farm and Ranch Operators

- Adapt to changing needs
 - ☞ Explore new ideas
 - ☞ Resource managers
 - ☞ Networking
- Strategic thinkers
- Objectively understand people
- Seek improvement
- Emphasize system's perspective
 - ☞ Consider alliances
- Excellent risk managers
- Review “what if” scenarios
 - ☞ Develop contingency plans
- Consider “big picture” events
- Strive to overcome challenge
- They lead and motivate people
- Develop a balanced performance
 - ☞ Production, finance, personnel, marketing
- Concentrate on successful performance
 - ☞ Treat causes not symptoms
- Decisions focused on reason and judgement
- Able to implement good ideas
- Communicate what, how and why
 - ☞ Create team effort

AREA OF TEXAS

- **Texas is as large as New England, New York, Pennsylvania, Ohio and Illinois (268,601 square miles)**
- **7.4% of water and land area of U.S.**
 - **Land: 261,914 square miles (2nd)**
 - **Water: 6,687 square miles (9th)**
- **801 miles north to south**
- **773 miles east to west**
- **Population 2005: 22,859,968***

***Estimated by Economic Research Service as of May 8, 2006**

TEXAS LAND AREA

(million acres)

➤ Total Land	167.6
➤ Farms and Ranches	129.9
➤ Pastureland	83.4
➤ Cropland	38.7
➤ % Irrigated	11.8

U.S. LAND AREA

(million acres)

➤ Total Land	2264.0
➤ Farms and Ranches	938.3
➤ Pastureland	395.3
➤ Cropland	434.2
➤ % Irrigated	11.6
➤ Population 2003:	290,809,777

TEXAS RANKS FIRST

- **Sales of cattle and calves**
- **Sheep and wool**
- **Goats and mohair**
- **Upland cotton, cottonseed and products**
- **Hay and sorghum silage**
- **Farm and ranch land**
- **Farms and ranches**

Leading States in Value of Farm Real Estate, January 1, 2006

State	Million Dollars
1. <i>Texas</i>	<i>162,250</i>
2. California	142,296
3. Illinois	103,740
4. Iowa	92,588
5. Arizona	87,770
6. Florida	72,800
7. Minnesota	66,000
8. Missouri	59,598
9. Indiana	54,450
10. Nebraska	49,813

AGRICULTURE FUNDAMENTALLY DIFFERENT

- **Tied to nature, biological, renewable**
- **Demand changes more slowly than supplies**
- **Many producers competing**
- **Farmers are generally price takers**

State Ranking by Cash Receipts 2003, 2004, 2005

State	2003	State	2004	State	2005
1. California	28.4	1. California	31.7	1. California	31.7

	Net farm income 5/	6,295,953	--	--	8.5	73,833,886

-- = Not applicable.

1/ The cumulative percentage is the sum of the percent of total receipts for each commodity and all preceding commodities.

2/ Percent State receipts are of U.S. receipts for same line item.

3/ Commodities at the bottom of the above ranked list of commodities and having no accompanying data would have appeared within the ranked list of leading commodities, but were excluded to avoid disclosure of confidential information about individual producers.

4/ Government payments made directly to farmers in cash or Payment-in-Kind.

5/ Net farm income, a value of production measure, is the farm operator's share of the sector's net value added to the National economy from production activities within a calendar year.

-- = Not available.

¹Includes food purchased primarily at retail food stores.

²Includes food purchased at restaurants, fast-food outlets, and other public eating places, and food served in institutions, such as hospitals, schools, and rest homes.

Source: Calculated by ERS based on data from government and private sources.

Distribution of Consumer Food Expenditures 1970 - 2004

Farm value is a measure of the dollar value received by farmers for farm commodities equivalent to food purchased by consumers at food stores and eating places. Marketing bill is difference in dollars between farm value and consumer expenditures for foods produce on U.S. farms.

Consumer Food Expenditures: At Home vs. Away from Home, 1963 - 2004

At home includes food purchased primarily at retail food stores. Away from home includes food purchased at restaurants, fast-food outlets, and other public eating places, and food served in institutions, such as hospitals, schools, and rest homes.

Farm Value as Share of Consumer Expenditures 1954 - 2004

Farm value component of consumer expenditures for domestically produced farm foods. Source: ERS/USDA

What a Dollar Spent on Food Paid for in 2004

Over a third went for food marketing labor costs.

The marketing bill for U.S.-grown food totaled \$633.4 billion in 2004.

* Other costs includes depreciation, rent, advertising and promotion, interest, taxes, licenses, insurance, professional services, local for-hire transportation, food service in schools, colleges, hospitals, and other institutions, and miscellaneous items.

1. In pounds, retail weight unless otherwise stated. Consumption normally represents total supply minus exports, nonfood use, and ending stocks.

Calendar-year data, except fresh citrus fruits, peanuts, tree nuts, and rice, which are on crop-year basis.

Meats and fish are boneless, trimmed weight.

Eggs exclude shipments to the U.S. territories.

Whole milk includes plain and flavored; lowfat milk includes plain and flavored, and buttermilk.

Fruits and vegetables are farm weight.

Flour and cereal products include rye, corn, oats, and barley products. Excludes quantities used in alcoholic beverages, corn sweeteners, and fuel.

Caloric sweeteners are dry weight equivalent.
